The Birrana CONTROLLED FIT Wheel Bearing Package

For over 17 years Birrana has been achieving long wheel bearing life using a combination of special fits, flexible spacer between the bearings, hardened spacer between outer cone and anchor hub and proprietary preload adjustment.

Birrana Engineering can now offer you the same long life you have come to expect from Birrana wheel bearings but with the convenience of inner cone removal *without special tools*.

Introducing the Birrana "Controlled Fit" wheel bearing setup

1. The latest Birrana wheel bearings for long life performance
2. "Controlled Fit" spindles mean you don't need a special puller to remove the inner bearing cone
3. HVOF spindle seat repair to resist wear
4. Birrana flexible spacer clamps the wheel bearings to help prevent rotation
5. Proprietary Birrana preload adjustment for long life
6. Birrana hardened and splined spacer between the outer bearing cone and anchor hub helps keep the preload for the life of the wheel groups
7. Extended warranty
